TO THE OWNERS OF WATER RIGHTS IN OWENS VALLEY:—On Thursday, September 7th, 1905, the city of Los Angeles will vote for or against issuing $1,500,000 of bonds, for the purpose of acquiring water rights in Owens Valley, and making surveys for a conduit large enough to carry all the water of this valley to the semi-tropic portion of Los Angeles county, including domestic supply for the city of Los Angeles; and we, your committee, believe that it is their ultimate intention to buy and divert from this county every inch of water in Owens Valley. We base our belief on the statements made by the City Engineer of Los Angeles. The

You can therefore see that one inch of water will cover one acre of land over eighteen feet deep in 365 days. The service required of water on new sandy land is to cover the land to a depth of four feet during the irrigating season. Counting off one-ninth for loss in reservoir and ditches, an inch of water should irrigate four acres of alfalfa. Here, then, is the value of an inch of water, used for raising alfalfa on land that we consider takes more than the average amount of water. The average yield of alfalfa, including pasturage in spring and fall, is five tons per acre; average net value clear of labor is $2.00 per ton, equals $10
